New Products & Industrial Success Stories

Biocatalysis is one of the most interesting modern branches of biotechnology for its interdisciplinarity in biology, chemistry and process engineering.

The combination and synergy of these disciplines provide modern industries with powerful possibilities to develop new products and improve existing processes.

The 2018 CeBiTec conference on "Reaction Concepts for Industrial Biocatalysis" brings together academia and industry to promote discussion about current trends and topics in this area.

We look forward to welcoming you!
